NextGen becomes Ixia's first technology partner in Asia

NextGen, Inc. (head office: Chiyoda-ku, Tokyo; President & CEO: Shinji Onishi; hereinafter "NextGen") is proud to participate in the partnership program offered by Ixia (head office: California, USA) and has joined the [Channel Xcelerate](#) program as the first technology partner in Asia.

The integrated solution featuring NextGen's NX-C6000/NX-C6500 network forensic and IDS (Intrusion Detection System) system for VoIP/IMS core networks and the Ixia Net Tool Optimizer (NTO), part of its [Visibility Architecture](#), has already been deployed at several leading telecommunications carriers and has received high marks. This partnership with Ixia is an effort to further strengthen the solution and will allow NextGen to expand its market and increase brand recognition in Japan and other countries through the promotion of creative solutions.

Commercial deployment of VoIP (Voice over IP) as typified by VoLTE (Voice over LTE) is spreading in the equipment of telecommunications carriers, while conversion to IP is taking place end-to-end in everything from interconnection between carriers to connections between devices. In conjunction with this, technology to ensure network security is required, just as it is with the Internet. This integrated solution provides network visualization and allows customers to optimize their capital investments and promote early detection and appropriate measures for security risks.
