NextGen rolls out its IMS security solutions in Europe

Tokyo, April 10th, 2014 - NextGen, Inc. (Tokyo, Japan. JASDAQ: 3842) today announced that Blue Telecom Consulting SL (hereafter BlueTC), a consultancy specialized in telecom services, is now rolling out NextGen's IMS security solutions below in Europe.

    i.   VoIP aware IDS & Forensic System NX-C6000/NX-C6500
    ii.   IMS Security Audit Service

European operators are now preparing for VoLTE (Voice over LTE) services with the underlying IMS infrastructure and making great efforts to ensure IMS network security end-to-end. They, on the other hand, are facing a serious situation that they need to optimize capital investment pertaining to SBCs (Session Border Controllers) acting as firewall for VoIP (Voice over IP) services.

In such a context above, NextGen, a leading provider of SBC integration, has numerous achievements of IMS security solutions which decomposes an SBC with a bunch of plug-ins into separate basic SBC and advanced IDS control systems. Besides, NextGen is a pioneer of in-depth IMS security analysis based on its own knowledge base and the offering has proven to be successful in the past for more than 150 systems.

Since 2013, NextGen and BlueTC collaborate on mutually promoting our respective and complementary portfolios of telecom services & solutions, and that endurance resulted in NextGen & BlueTC now being able to offer an optimal and more complete protection of networks to European operators.
